

**REMARKS**

Reconsideration and allowance of this application are respectfully requested. New claims 8 and 9 have been added. Claims 1-9 are now pending in the application. The rejections are respectfully submitted to be obviated in view of the remarks presented herein.

**Rejection Under 35 U.S.C. § 102(b) - Reifman et al.**

Claims 1, 2 and 4-6 have been rejected under 35 U.S.C. § 102(b) as allegedly being anticipated by Reifman et al. (U.S. Patent Number 5,917,615; hereinafter “Reifman”). The rejection is respectfully traversed.

Regarding claim 1, Applicant’s claimed invention relates to a document transmission apparatus, comprising a document data transmission section, a transmittal letter production section, a transmission section, an additional information storage section, and an operation section. The operation section selects an arbitrary one of a plurality of pieces of additional information stored in the additional information storage section, and the transmittal letter production section produces a transmittal letter in which the additional information selected by the operation section is inserted.

Applicant respectfully submits that the disclosure of Reifman does not anticipate the claimed invention. Reifman discloses a facsimile transmission system as shown in Figure 1. A file storage unit (28) such as a floppy disk unit or hard drive may store data files and cover page styles as individual files (column 8, lines 44-45; column 20, lines 60-61; column 21, lines 21-22). The cover page is designed by the user such that appropriate information is “filled in” by the user through manual entry of data, and a cover page style may be selected from a list of

stored facsimile cover pages (column 20, lines 28-52). The cover pages may be created by the user and then stored in the file storage unit (28). In addition, the user may also enclose one or more data files with an outgoing facsimile message (column 21, lines 17-19). “The enclosed data file may be any data file such as a word processor data file or a spreadsheet data file. The data file is typically stored in the file storage unit 28” (column 21, lines 19-22). The user selects a data file to be transmitted with the facsimile by selecting the desired file from a list of files. In such a way, the file is sent with the facsimile transmission as an enclosure (column 21, lines 33-44).

Reifman does not teach or suggest an operation section which selects an arbitrary one of pieces of additional information from within an additional information storage section, and produces a transmittal letter in which the additional information selected by the operation section is inserted, as Applicant claims. Reifman merely attaches a user chosen data file to the facsimile transmission (Figures 15 and 16), and does not insert additional information to the transmittal letter. Alternatively, Reifman teaches a “filling in” of information into the cover page by a user instructed to enter the information using a keypad (column 20, lines 37-38). However, the “filling in” of information is manually entered data, not selected additional information from within the additional information storage section, which is inserted into the transmittal letter, as claimed. Reifman’s design cover page may be selected from a list of stored facsimile cover pages, however, the selection of these cover pages is a selection of an actual file representing a specific cover page style. The selected file is not inserted into a transmittal letter. Contrarily, the selected file itself is the desired cover page, and there is no teaching in Reifman of inserting

AMENDMENT UNDER 37 C.F.R. § 1.111  
U.S. Application No. 09/960,344  
Attorney Docket No. Q66385

additional information selected from within an additional information storage section, into the transmittal letter, as Applicant claims. At least by virtue of the aforementioned differences, Applicant's claim 1 distinguishes over Reifman. Applicant's claim 5 relates to a corresponding program on a recording medium for a document transmission apparatus, and is allowable for analogous reasons as discussed above. Applicant's claims {2 and 4} and {6} are dependent claims including all of the elements of independent claims 1 and 5, respectively, which, as established above, distinguishes over Reifman. Therefore, claims 2, 4 and 6 are distinguished over Reifman for at least the aforementioned reasons as well as for their additionally recited features. Reconsideration and withdrawal of the rejection under 35 U.S.C. § 102(b) are respectfully requested.

With further regards to claims 2 and 6, the additional information stored in the additional information storage section is displayed on a display section, and the additional information displayed on the display section is arbitrarily selected. Reifman only displays the names of the files listed, and not information stored (Figures 15 and 16; column 21, lines 24-45). Also, as shown in Figure 14, only the names of the stored cover page style files are displayed, not information (column 20, lines 49-67). At least by virtue of these additional differences as well as the aforementioned differences, Applicant's claimed invention distinguishes over Reifman.

**Rejection Under 35 U.S.C. § 103(a) - Reifman et al.**

Claims 3 and 7 have been rejected under 35 U.S.C. § 103(a) as allegedly being unpatentable over Reifman. The rejection is respectfully traversed.

Applicant's claimed invention relates to document transmission as discussed above.

Applicant further recites in claims 3 and 7 that a registration number and a title for each of the pieces of additional information is stored into an additional information storage section, and at least the registration numbers and the titles of the pieces of additional information stored in the additional information storage section is displayed as a list. One of the displayed registration number is additionally designated to select the additional information and a text of the selected additional information is inserted into the transmittal letter.

As previously discussed, Reifman does not teach or suggest an operation section which selects an arbitrary one of pieces of additional information from within an additional information storage section, and producing a transmittal letter in which the additional information selected by the operation section is inserted. Furthermore, there is no teaching or suggestion in Reifman of the insertion of a text of the selected additional information into the transmittal letter, as claimed. The attachment of a user chosen data file to the facsimile transmission (Figures 15 and 16) solely attaches the data file to the transmission of the facsimile, and does not insert additional information to the transmittal letter. Reifman's file storage unit (28) also only stores file names, which are displayed in a list (Figure 15). There is no teaching or suggestion in Reifman of including a registration number for each piece of additional information, displaying the registration numbers and the titles of the pieces of additional information as a list, and designating one of the displayed registration numbers to select the additional information for insertion of a text of the selected additional information in the transmittal letter, as Applicant claims. Examiner maintains that it would be advantageous to modify Reifman to utilize

AMENDMENT UNDER 37 C.F.R. § 1.111  
U.S. Application No. 09/960,344  
Attorney Docket No. Q66385

registration numbers, and that “these features are well known in the art and it would have been an obvious modification of the system disclosed by Reifman” (Office Action paragraph 9).

However, Examiner has not provided any references suggesting these elements. Further, Examiner’s conclusions of the advantages of using registration numbers are merely hindsight, and there is no motivation apparent in the system of Reifman to designate a registration number to select the additional information. At least by virtue of the aforementioned differences, Applicant’s claims 3 and 7 are patentable over Reifman. Reconsideration and withdrawal of the rejection under 35 U.S.C. § 103(a) are respectfully requested.

**Newly Added Claims**

Claims 8 and 9 are newly added by this Amendment and are believed to be in condition for allowance.

In view of the above, reconsideration and allowance of this application are now believed to be in order, and such actions are hereby solicited. If any points remain in issue which the Examiner feels may be best resolved through a personal or telephone interview, the Examiner is kindly requested to contact the undersigned at the telephone number listed below.
